

Ecozema® is a line of tableware products which are biodegradable and compostable according to norm EN13432.

They are made of materials coming from renewable vegetable resources such as cellulose pulp or fiber and bioplastics (compostable biopolymers such as Mater-bi®, Ingeo™ P.L.A. and Bioplast).

Ecozema® products contribute to reducing the exploitation of non-renewable resources and guarantee advantages such as lowering CO2 emissions, reducing the greenhouse effect, energy saving and agricultural development.

**Make the difference with Ecozema® tableware!**

profile

## how to dispose of Ecozema® tableware?

After their use, our compostable tableware may be disposed of together with food scraps in the organic waste bin. The waste will subsequently be sent to an industrial composting facility in order to obtain a fertilizing compost in 90 days.

*Ecozema® products fully embrace the Minimum Environmental Criteria made mandatory by the Environmental Regulations annexed to the Italian Stability Law (dated 28th December 2015) that reformed the Green Public Procurement (G.P.P.).*

**our range of products include the following categories** →
